📍 Istanbul, Turkey

I am a friendly, fun and social person. I love spending time outside and doing sports. I have been interested in computers since my childhood.

SKILLS

Programming	C Sharp, Visual Basic, JavaScript, Python, C, Java
Frameworks	ASP.NET, .NET Core, Entity Framework, Angular
Database	MsSQL, LINQ
Development Tools	Visual Studio Code, Pycharm, Azure, Netbeans, Git
Others	BoilerPlate, MVC, Razor Pages, Microsoft Dynamics NAV, Topshelf

EXPERIENCE

July 2025 July 2024	Software Specialist, HÖTİÇ <ul style="list-style-type: none">Applications were developed to make the work easier for store and office workers. Excel tasks were automated with software. Old programs were recreated with new technologies.Label printing software was developed according to store requirements. Remote printers were installed and integrated with the developed software. Personalized store requests were addressed.Daily or weekly database manipulation applications were developed and serviced using the Topshelf library. They were hosted on server machines.All software and hardware needs of the departments were met. <p>C Sharp Visual Basic Microsoft Dynamics NAV REST API Topshelf MsSQL Hardware Embedded Devices</p>
------------------------	--

March 2024 Feb 2022	Full Stack Developer, METATECH SOFTWARE CORP <ul style="list-style-type: none">Sellable CRM : A website project was created using boilerplate architecture, with Angular on the front end and C Sharp on the back end. Tenant logic was used for the subscription system. In this system, a different database is automatically opened for each new subscriber. Tenant employees have many features through this site, such as taking leave, managing their customers, earning progress payments, directing tasks to other employees and providing a control and approval mechanism for this, selling products, having a to-do list, sharing posts and interacting with each other. They were also able to see a summary of all their activities in their unique profiles.Licencer : It was created using MVC for licensing the applications sold. This application was made with C Sharp. I fixed the interface improvements and database problems, and added the desired new features.TradeMaster : A stock market application was made using C Sharp in the backend and React in the frontend. I worked mostly in the interface and backend, and also contributed to the frontend by learning basic React knowledge.Foureyes : It is an application that personalizes a stock market application used worldwide. C sharp and Angular were used in its construction. I worked both in the software testing team and in software development. <p>C Sharp BoilerPlate Azure Entity Framework Core LINQ Angular HTML CSS Javascript Typescript MsSQL ASP.NET ASP.NET Core MVC</p>

2022 2021	Intern, METATECH SOFTWARE CORP <ul style="list-style-type: none">Learn BoilerPlate Framework with several courses, develop and research about C Sharp for back-end and Angular for front-end. To gain experience, applications were developed from scratch using the boilerplate framework.Experience at Rest API and learn C Sharp libraries like SignalR, Topshelf, CRON Scheduler. MVC was also used. An application that enables the management of Windows services, works with a scheduler and shows the status of the services simultaneously was created. Opening, closing and stopping Windows services were done from this application.Software updates of the programs used were made. Computers were maintained and updated. Installations were made from scratch. <p>C Sharp Angular BoilerPlate REST API .NET Core MVC Hardware</p>

EDUCATION

2022 Marmara University | Computer Engineering
 2018 Profilo Anatolian Technical High School - Database Programming

PROJECTS AND WORKS

CLASSIFYING NEWS ACCORDING TO TOPIC WITH ARTIFICIAL INTELLIGENCE

2022

I developed this project in Python using a single-layer perceptron artificial intelligence model. It was done to determine which topic the news entered as input by the user belongs to.

Python Perceptron Pycharm GitHub

ONSURVEYLINE

2023

Participatory survey project using MVC architecture and C Sharp programming language. Users with a profile earn points as they create and complete surveys. It is a survey site where those who do not have a profile can access the surveys via the link. The application ranks with user scores and creates a competitive environment.

C Sharp MVC Razor Pages Azure Visual Studio MsSQL

PERSONALIZED BODYBUILDING PROGRAM APPLICATION.

2021

Python application that creates a personalized sports program based on the person's information. Python's tkinter library was used as the visual interface.

Python Tkinter Pycharm GitHub

LUGAVIM.

2022

Developed using ASP.Net Razor pages. Users add words to the dictionary library along with their meanings and origins. The words to be added are added to the library after the moderator's approval.
